Custom Polishing
Systems

Exposed Aggregate
Systems

Color To
Enhance Your
Everyday
Spaces

Use this color chart to make color selections for the following products:

PRODUCT NAME	SPECIAL CONSIDERATIONS
Bomanite Chemical Stain	<p>Generally similar to all colors shown with no custom colors available.</p> <p>There is an element of uncertainty and unpredictability inherent in the use and final appearance of chemical stain which is considered to be desirable when selecting Bomanite Chemical Stain as a product due to the uniqueness of each installation along with the variegated hues that form within a single color. It is not uncommon to see significant yet unexpected variations in color within the same application. The use of blue and green based Bomanite Chemical Stains are not recommended for exterior applications where the moisture content of the concrete is uncontrollable.</p> <p><i>*When applied to traditional concrete or any portland cement-based product, Bomanite Chemical Stains will produce a wide range of finished colors depending on many factors. Age of substrate, cement color and content, moisture content, the presence of polymers or other admixtures, pozzolans such as fly ash or similar, the method of application, the dwell time allowed, finishing techniques, mix designs, curing practices, condition of substrate and the sealer selected along with other factors will all affect the final appearance. It may be required that hard troweled or previously sealed surfaces be mechanically prepared by grinding prior to staining.</i></p>
Bomanite Con-Color	<p>Available in all colors shown plus all colors shown on the Bomanite Coloration Systems Color Chart as well as custom colors.</p> <p>Some colors may be more sensitive to UV exposure than others. Consult your local Bomanite Licensed Contractor or Bomanite Technical Services prior to selection of any questionable colors such as bright shades or custom colors.</p> <p><i>*When Bomanite Con-Color is applied to traditional concrete or any portland cement-based product the resulting color can be influenced by a range of factors. Age of substrate, cement color and content, moisture content, the presence of polymers or other admixtures, pozzolans such as fly ash or similar, the method of application, finishing techniques, mix designs, curing practices, condition of substrate, surface preparation, substrate porosity and the sealer selected along with other factors will all affect the final appearance. It is required that hard troweled or previously sealed surfaces be mechanically prepared by grinding prior to staining.</i></p>
Bomanite Concrete Dye	<p>Available in all colors shown with no custom colors available.</p> <p>Bomanite Concrete Dye is for interior use only due to the varying degrees of UV and PH sensitivity.</p> <p><i>*Cement color and content, moisture content, the presence of polymers or other admixtures, the method of application, finishing techniques, curing practices, condition of substrate and the sealer selected along with other factors will all affect the final appearance. It may be required that hard troweled or previously sealed surfaces be mechanically prepared by grinding prior to staining.</i></p>

IMPORTANT NOTES:

This chart represents the products in sealed form utilizing a water-based acrylic sealer with less than 100 grams per liter VOC content. The use of differing types of sealers or coatings will affect the final appearance. In the case of custom colors utilize a Pantone guide or provide a solid color for matching purposes.

It is strongly recommended that in the case of all Patène Arctectura products samples be created, viewed and approved using construction techniques and materials identical to those that will be used in the actual construction of the project. This sampling process must be completed prior to specifying the final color and appearance.

Applied to Ground Uncolored (Gray) Concrete

Blueberry Sweet Potato Tangerine

Roasted Pepper Warm Honey Dandelion Pineapple

Thistle Green Black Orchid Cattail Brown Root Beer

Maple Syrup Red Berry Rhubarb Pomegranate

*NOTE: Color swatches on this chart approximate as close as possible the final appearance of concrete and cementitious toppings colored with Patène Arctectura® products. Variations can be expected due to the job conditions, finishing techniques, exposure of aggregates, use of sealers or coatings, curing methods and raw material drifts. Certain combinations of products and/or colors may produce dramatically different than anticipated color appearances. It is strongly advised that a sample be produced prior to installation of any product.
